Project Metso

- Resource booking application
Peter Cajander 2011-02-13

Background

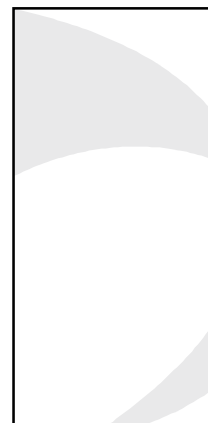

- Web-based booking application from the 1990s
- Booking of speaker phones, cars, conference rooms and other internal resources
- Current application is not intuitive and easy to use
- Overview functionality is missing

Project goal

Increase the use of and overall satisfaction level of the resource booking application

Create an application that is intuitive and easy to use

Main functionality

- Booking of resources should be fast and easy
- Allow cancellation of booking
- Display all active bookings
- Display bookings made by an employee
- Create traceability to monitor bookings
- Show first available time slot for a resource

Main functionality

- Send email to booker with reminder to return the resource after due date
- Resource administration (add new, remove or edit)
- User account administration (add new, remove or edit)
