Project for week 7 (in groups of three)

1) Select an application
   - A ticket booking system
   - A webshop
   - An e-learning system
   - A music application
   - Or something totally different

   How can this application be empowered by the use of social media?

2) Describe (and sketch) how you would design an interface for the application with the addition of social media features

3) Explain the benefits that is made possible by doing this

4) Do a critical reflection about what would be needed for it to work
