

Instructions

- There are three mandatory assignments. NV students also have to do a project.
- The assignments can only be handed in through this ping pong interface.
- The assignments may be completed in groups of two, but every student needs to hand in his/her own assignment. Give the name of your coworker in this case.
- All programming should be done in Matlab.
- For each assignment, present your well documented code, demonstrate its validity by an example, and give well motivated answers to questions.
- If you fail to pass one or several assignments by June 7, 2005, you have the opportunity of solving three new assignments in August or in January. Please contact your teacher for more information.
