What are we doing?

- Writing a complete Web site solution in Erlang
- Using open source components to make the system components interexchangeable
- Making room for a new, fresh community

And Why?

- Increase maintainability
- Increase community activity
- Make web applications in Erlang easier to incorporate

The bird's-eye view

A simple DB transaction demonstrating double abstraction

How hard can it be?

- Things just aren't compatible
- Abstractions, are they abstract enough?
- Open source documentation either lacking or missing.

Architectural Design

- Bus architecture
- Distributability
- Customisability
- Double layers of abstraction make all components exchangeable
