

Intro. Computer Control Systems: F12

Summary

Dave Zachariah

Dept. Information Technology, Div. Systems and Control

What was this course about?

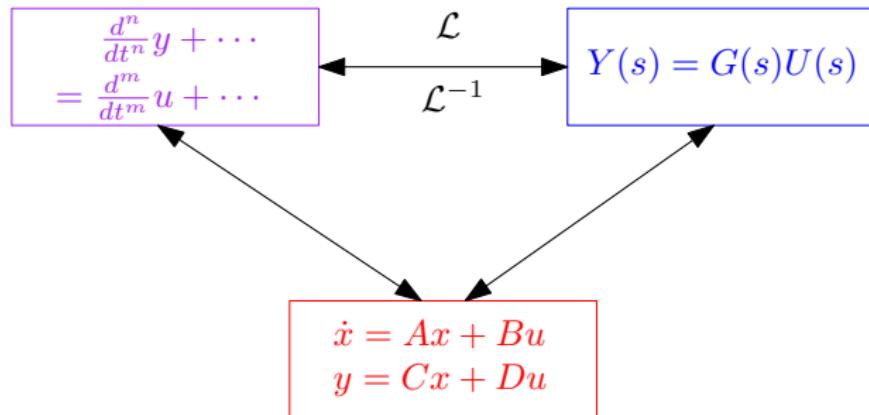

What was this course about?

We want to **control** dynamical **systems** in a **good way**

Control dynamical systems in a good way

Control dynamical systems in a good way

Systems: Linear time-invariant system models

Control dynamical systems in a good way

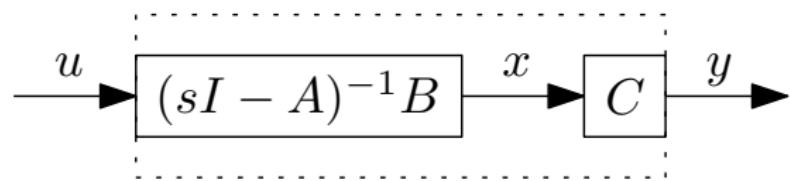

Systems: Linear time-invariant system models

Complex-valued *transfer function* is compact (assumes initial values 0)

Control dynamical systems in a good way

Systems: Linear time-invariant system models

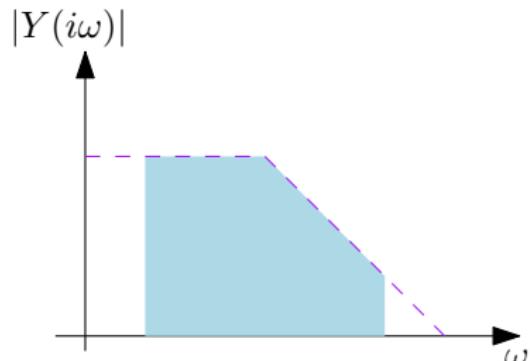

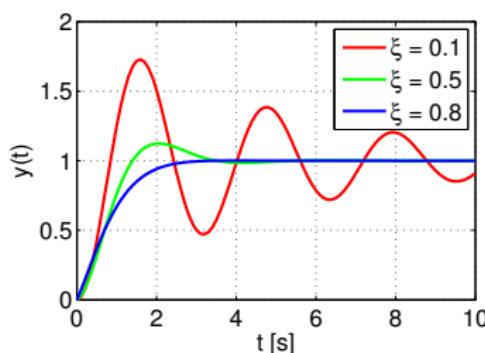

State-space description with matrices and arbitrary initial values

Control dynamical systems in a good way

Systems: Linear time-invariant system models

Interpretations in *time-* and *frequency* domain

Control dynamical systems in a good way

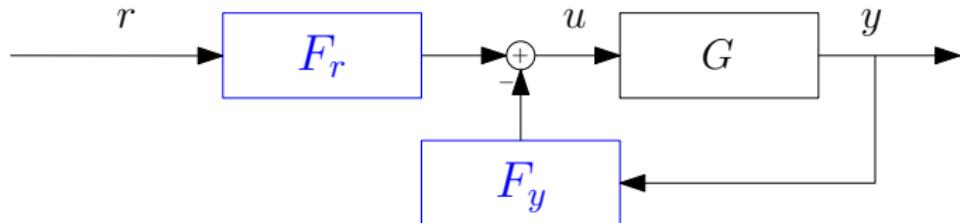

Control: Feedback controllers to achieve $y(t) \approx r(t)$

- ▶ PID-controller
- ▶ P-control with frequency-based compensation
- ▶ State-feedback controller (with observer)

Closed-loop systems from $r(t)$ to $y(t)$

Control dynamical systems in a good way

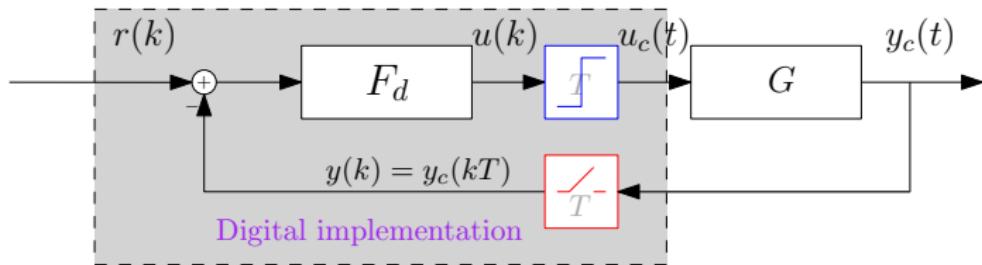

Control: Feedback controllers to achieve $y(t) \approx r(t)$

Structure of general linear feedback (See F5+F10)

Control dynamical systems in a good way

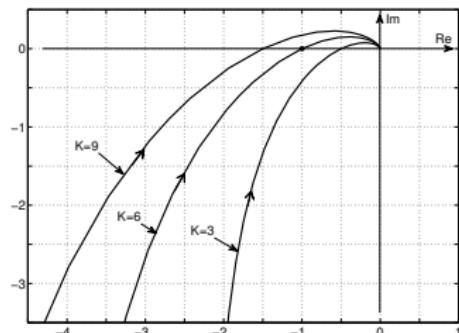

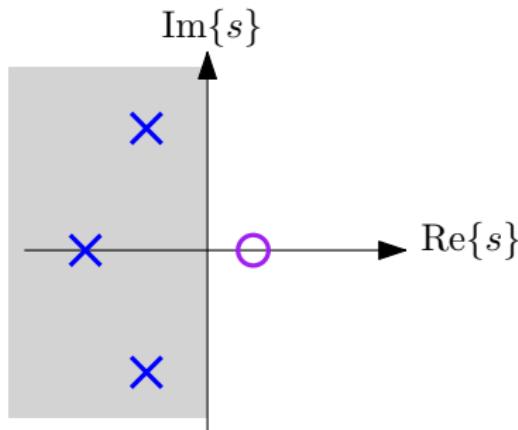

Control: Feedback controllers to achieve $y(t) \approx r(t)$

Discrete-time models for digital implementation

Control dynamical systems in a good way

Good: Control criteria for closed-loop system
Stability

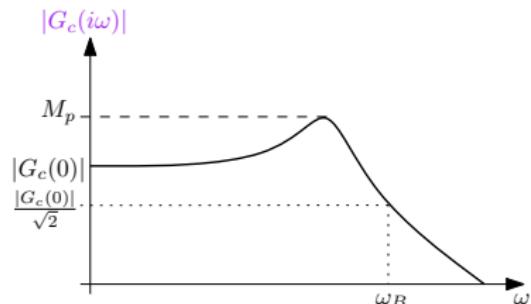

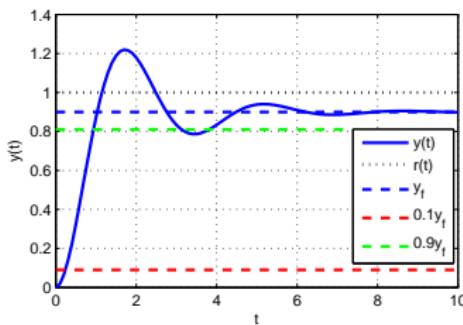

Methods: i) compute *poles*, ii) *Routh's algorithm*. iii) *root locus*,
special case iv) *Nyquist curve* $G_0(i\omega)$

Control dynamical systems in a good way

Good: Control criteria for closed-loop system

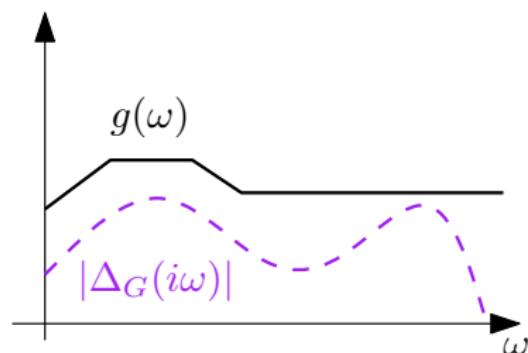

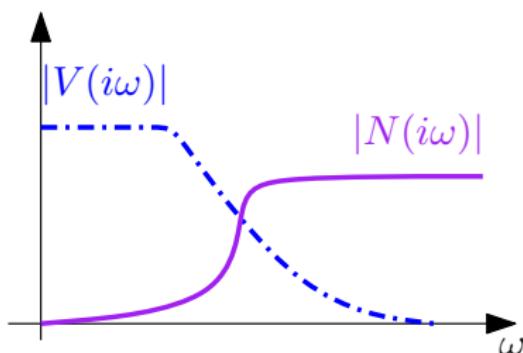

- ▶ Quickness
- ▶ Damping
- ▶ Accuracy

Control dynamical systems in a good way

Good: Control criteria for closed-loop system

- ▶ Sensitivity towards disturbances and noise
- ▶ Robustness towards model errors

Written exam

Individual estimate of attained knowledge goals

Written exam

Individual estimate of attained knowledge goals

Each problem solution evaluated using **three criteria**:

1. **submitted** solution
2. **demonstrates** understanding of problem
3. provides a reasonable and **reproducible** solution

Written exam

Individual estimate of attained knowledge goals

Each problem solution evaluated using **three criteria**:

1. **submitted** solution
 2. **demonstrates** understanding of problem
 3. provides a reasonable and **reproducible** solution
-
- ▶ **Formula sheet:** Key formulae handed out with exam. BETA and Pocket calculator allowed.
 - ▶ **Bonus points** from assignments can eliminate half or the entire first problem.
