

Vanadis Diagnostics develops novel DNA analysis technologies for one of the fastest growing fields in life science today. Vanadis is founded by a team of serial entrepreneurs with strong and successful startup track-record. The team has previously demonstrated successful commercialization of novel diagnostic products on a global market, at for example Halo Genomics, Agilent Technologies and Fiom.

We are currently looking for thesis students for our systems development group that enjoy working in a challenging and fast-paced environment. We encourage applicants from engineering programs such as computer science, medical engineering, electrical engineering, engineering physics, or similar.
