Student-active and student-centered teaching and learning

March 15th 2018, 09.00 – 12.00, room 6K1113, Ångströmlab

The course on student-active and student-centered learning has been offered at Information Technology on three occasions in 2017, and will now be run a last time for those of you that could not participate. Teaching staff at the Department of Information Technology are warmly invited to participate in the three-hour course. The course will be held by TUR (Council for Educational Development), on behalf of the Faculty of Science and Technology.

This course is a key aspect of the Faculty’s action plan for the professional development of all teaching staff members.

The short course will highlight aspects of teaching and learning techniques that put students in focus, including specific examples from information technology education. Issues that will be discussed include: What counts as “student-centred” and/or “student-active”? What aspects do we need to consider when designing such teaching and learning activities? How do we ensure that they actually help to improve students’ understanding and the quality of their education?

To help further tailor the course for teaching information technology, we would like to encourage you to send in ideas, issues and questions that would you like to be addressed. Feel free to send them to Stefan Pålsson (Stefan.Palsson@it.uu.se).

To register for the course, please go to: https://doodle.com/poll/h6m5d3ps35e9v7yg

Please note that each course is limited to 40 participants (first come, first served).

Kindly register as soon as possible. We looking forward to seeing you!

Stefan Pålsson and Maja Elmgren
